

EDUCATION

University of Washington – Junior

Bachelor of Science in Computer Science and Software Engineering

Expected Graduation: June 2027

Experience

Amazon Web Services (AWS)

June 2026 – September 2026

Software Development Intern, Seattle Washington

- Incoming Summer 2026 intern joining the team responsible for developing and optimizing AWS profiles.

Apexial

January 2025 – April 2025

Software Development Intern, Issaquah WA

- Developed a C++ vector storage and retrieval system integrating with GPT-4 Mini, enabling real-time semantic search across thousands of embeddings.
- Improved query accuracy by 20% by implementing a cosine similarity retrieval pipeline, outperforming baseline keyword search results.
- Participated in weekly sprint reviews while independently designing key system components, demonstrating ownership and delivering all milestones on time.

Apple

August 2022 – Current

Technical Specialist, Bellevue WA

- Resolved complex hardware and software issues across the Apple ecosystem, providing personalized solutions that enhanced customer satisfaction and device adoption.
- Facilitated Today at Apple coding workshops, teaching fundamentals of programming to 50+ participants in a hands-on environment.
- Mentored and onboarded 50+ new specialists, supporting team development through coaching and regular check-ins.
- Achieved a perfect 100% Net Promoter Score (NPS) across customer surveys and ranked as the store's top performer in the customer satisfaction metrics.

PROJECTS

AI-Powered Resume Analyzer

- Created a tool that evaluates user-uploaded resumes and provides feedback using keyword extraction, job-matching algorithms, and GPT-based enhancement suggestions.
- Built parsing and scoring functionality tailored to specific job roles, highlighting improvement areas and increasing keyword match accuracy by 25%.
- Integrated OpenAI's API to generate dynamic rewrite suggestions and formatting improvements, streamlining the process of tailoring resumes to job description.

Elgoog Mini Search Engine

- Built a phrase-search engine with a positional inverted index to return-exact match results by doc ID.
- Implemented posting list intersection via two-point merging on term positions to support multi-word, in order matches.
- Increased retrieval speed by 85% compared to a naïve scan (15% of baseline runtime) on the same corpus.

iOS Card Battle Game

- Built an iOS card game using UIKit where players face a CPU, with randomized card draws, score tracking, and custom visuals including a logo with two clashing swords.
- Designed and implemented polished gameplay animations including card-flip transitions and round win effect.

TECHNICAL SKILLS

Programming Languages: Java, Python, C++, C, JavaScript, Swift

Cloud and Developer Tools: AWS Lambda, Amazon S3, AWS IAM, AWS CLI, Git

Software Design: Algorithms, Data Structures, Object Oriented Design, Test-Driven Development

Analytical: Leveraging leadership, strategic time management, and technical problem-solving abilities refined through industry experience and collaborative coding work to contribute meaningfully to the CSSE program and advance as a software engineer.
